

Peace – Here is “Quant” – Luxalgo description -

The **MFB - 15 min OR sweep** is a precision entry tool designed to complement the broader market analysis provided by the "Universal MFB" and "Momentum Flow Build" indicators. It focuses specifically on the **liquidity cycles** that occur during the market open.

How it Works:

1. **Opening Range (OR) Establishment:** The script identifies the high and low of the first 15 minutes of the New York session (9:30–9:45 AM EST).
2. **The Sweep (Liquidity Purge):** It monitors for price poking outside this range to "grab" the stop-loss orders of early breakout traders. This is marked by a small **Sweep Arrow**.
3. **The Ch'd (Market Structure Shift):** After a sweep, the script waits for price to reverse and break the most recent structural pivot level. This confirms the "Change of Character" and triggers a **BUY or SELL** signal.
4. **Automated Trade Zones:** Upon a signal, it automatically plots a Green (Profit) zone targeting the opposite side of the range and a Red (Risk) zone at the structural pivot.

Synergy with the MFB Suite:

1. With the "Universal MFB..." (The Compass)

- **The Concept:** Use the Universal MFB for your **Daily Bias**. If the Universal MFB shows a Bullish "Bias" or "Above VWAP" status, you should primarily look for **BUY** signals from the OR Sweep indicator.
- **The Execution:** When the Universal MFB confirms a strong trend, the OR Sweep indicator helps you find the "dip" or "liquidity grab" to enter that trend at a much better price than simply buying a breakout.

2. With the "Momentum Flow Build..." (The Engine)

- **The Concept:** The Momentum Flow Build (often seen as the "Flow" oscillator at the bottom) shows you the **Internal Strength** of the move.
- **The Execution:** If the OR Sweep indicator fires a **BUY** signal at the same time the Momentum Flow Build is turning green or showing bullish divergence, it provides

high-probability confluence. It confirms that the reversal isn't just a price wiggle, but a genuine shift in volume and momentum.

Summary for the Trader:

- **Universal MFB:** Tells you *where* the market wants to go today.
- **Momentum Flow Build:** Tells you *how much power* is behind the move.
- **MFB - OR Sweep:** Tells you exactly *when* to enter and *where* to place your stops to capture the morning's range rotation.

Together, they form a complete "Top-Down" trading system that covers trend, momentum, and precise execution. Peace.
