

MFB – M.A.P. – Asia session

The “Time Window Advice” for the Asia Session for “MGC” (Gold futures) and “MNQ” was 8pm to 10pm EST (also 7pm – 10pm EST)

- 1) The “Momentum Flow Build w/ FVG v6 (clean)” will be drawing all the key levels, and the “Universal MFB Flow/Sweep Setup” indicator has some cool CISD alerts available – “Automation Management” is the key, not over focusing on the details of the charts – Peace.
- 2) “Agreement with previous session’s results”? - Where did NY close relative to Asia/London key levels (did it close above/below the levels where Asia/London either found “Acceptance” or “Reversal”)? Basically, we are comparing whether price displaces a level or reverses at a level, and whether the trading sessions agree.
- 3) With the “MFB – Value Reading Session” indicator – Where does Asia session open in relation to the previous NY session’s value range (VAH/VAL)? Above VAH is bullish, and below VAL is bearish.
- 4) (a reminder) If price sweeps a key level with a 5 min CISD – that is a good trade setup regardless of M.A.P. “Agreement” or “Disagreement” –

The 5 min chart CISD is “Structural evidence” of a potential shift at key levels.

An extra note regarding CISD:

- a “meandering” into a level is not a strong signal. Price should approach a level with energy, which indicates Smart Money participation, and that makes the CISD a valid trade setup – (I talk more about CISD in the “MFB – M.A.P.” PDF) – Peace -
