

Peace – Working on the “**15 n 5 Process**” (MFB – **Order Flow 7**, or whatever U like calling the mechanical process :o)

The indicators are "**MFB - Universal I.B.**" (for CISD), "**Momentum Flow Build w/FVG v6 (clean)**" (for key levels drawing), "**MFB - Order Flow7**" (Active Delta) and "**MFB - Value Acceptance**" (RSI Divergence)

- 1) **Location** – Key level and 15 min CISD
- 2) **Awareness** – 15 min RSI Divergence or “Active Delta” reading
- 3) **Price** response reading and **Structure** (CISD – “It own framework”)
- 4) **Trade entry** – **5 min CISD** (reversal) or **5 min FVG-123** (continuation)
(The 1min trade entry is optional, because some people prefer the 1 min chart trade entry, yet **I prefer the 5 min CISD**)

PSE

IB-LOW

CISD

The trade assistant said that the 5 min CISD is a good stop loss area

If price moves beyond that, the trade thesis is no longer valid

London Low - POSITIVE DELTA
Conflict: Delta opposes level type - Wait
MFB - Order Flow 7 - PDL

Most Recent: Flow

BIAS	BULLISH
VALUE	ABOVE VWAP

(1 min OPTIONAL) ----- STOP LOSS IS STILL BEST BEHIND THE 5 MIN CISD
