

“MFB – One Chart- 1 min” indicator

This indicator work well with **“Momentum Flow Build w/FVG v6 (clean)”**

...also with **“MFB – Value Acceptance”** (that draws 9-20 EMA)

The *“Decision Process”* idea is:

- 1) Key level –**
- 2) Momentum Change /Response –**
- 3) Structural Evidence –**
- 4) Trade Entry**

The process is the peace – Patience is the EDGE –

Beginner-friendly description (Luxalgo – Quant)

Think of it as looking for a setup in three stages:

1. **Location:** It watches prior-day, prior-week, and completed Asia/London highs and lows, along with confirmed swing highs and lows.
2. **Direction:** It looks for a price reaction around a key level. For FVG-123 setups, the default filters also require a prior key-level touch and a matching 9/20 EMA cross.
3. **Confirmation:** It waits for a three-candle gap, a retest, and then a confirmed candle close breaking out of the gap in the setup’s direction.

4. **...when the FVG-123 entry lines print**, the matching 9/20 EMA cross must have occurred, and the EMA trend/price-close conditions must agree with the trade direction.

...the cross **doesn't have to happen before the FVG forms or retests**. The indicator can track the FVG while waiting; it prints the signal and lines only after the later breakout close qualifies.

The ALERT:

Bullish FVG-123

Bearish FVG-123

For FVG-123, the displayed entry guide uses the signal candle's close; the stop is one tick beyond the far side of the gap, and the target is set at **2R**. These are planning guides—not executed or guaranteed trades. **Sweep/MSS and PWR signals are separate features (default “hidden” in settings).**

Some extra thoughts:

D.A.U. – Devotion (to process) – **Acceptance of Uncertainty** (Probability)

"The indicator is signaling **“current structural evidence”** - not getting "caught on the spokes of The Wheel of Life" - chasing "certainty through analysis".

The philosophy is meant to favor recognizing a Discernment (and knowing the difference between):

- 1) Structural Evidence (Key level Response and FVG-123)
- 2) Awareness (Value Range – VWAP)

Often times, the VWAP will be a place where price finds balance, so, the indicator *does not require price to close beyond VWAP* (only the 9-20 EMA)

The indicator is meant to encourage maturity in trying to make trading a business - through a “Series of trades” with a “proven process” (not just

basing success on one trade, that has no “statistical validity” as being profitable).

Peace -
