Welcome to MTF Key-Level FVG Delivery Framework—a higher-timeframe directional context indicator that highlights confirmed 15-minute Fair Value Gap (FVG) evidence around important price levels.

A **15-minute alert** means a completed 15-minute candle sequence met the indicator's conditions: a three-candle FVG formed after the first or second candle overlapped a key level, and the third candle closed beyond that level by the minimum distance.

- **Bullish alert:** Evidence formed at PDL or VAH; the close was above the level.
- **Bearish alert:** Evidence formed at PDH or VAL; the close was below the level.

Treat it as a **directional context cue**, not an automatic entry or a promise that price will continue that way.

A green **15m** arrow marks bullish evidence when Candle 1 or 2 overlaps PDL or VAH, a bullish three-candle FVG forms, and Candle 3 closes above the level. A red **15m** arrow marks bearish evidence when Candle 1 or 2 overlaps PDH or VAL, a bearish FVG forms, and Candle 3 closes below the level. By default, Candle 3 must close at least **0.10 × 15-minute ATR** beyond the level. Signals are confirmed after the 15-minute candle closes.

Use the arrows to help frame higher-timeframe directional context—not as standalone entries or guarantees of future price movement. PDH/PDL use the prior daily candle; VAH/VAL are optional manual inputs.

Scope note: Although the script includes 5-minute sequence settings and calculations, this version only displays and alerts on the 15-minute context signals. It does not currently plot 5-minute IFVG or 1-minute entry markers.

Peace -
