Peace – Here is a PDF of charts from the 10-28-26 NY session open.

First I am going to talk about how I am “Qualifying” trade signals better now, working with “Price and Delta”.

The Epiphany this week is to “Be The Future” (work with Technology)

1) Wait for price to touch a **key level**

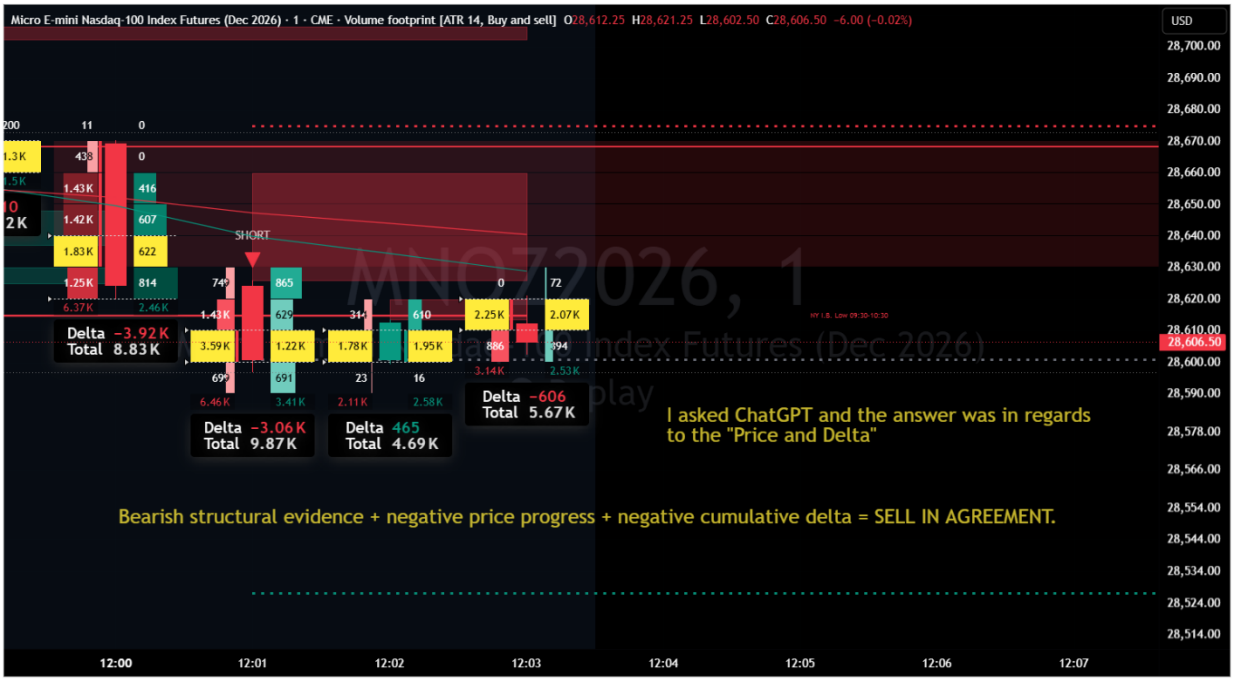

2) **Take a screenshot of the level** and a view of the 5 min (1 min) Footprint chart, and let a Trade Assistant give a “Reading” of whether (or not) the Price and Delta data is “In Agreement” or not.

For example:

Got a 1 min trade signal:

Here is the description of why we look at **"Price/Delta" (from "ChatGPT"):**

Price/Delta readings measure the *relationship between price movement and aggressive buying or selling activity.*

Price/Delta readings help qualify structural trade signals by showing whether aggressive order flow agrees with the direction of a CISD or FVG-123 response at a key level.

- **In Agreement:** Price rises with positive delta or falls with negative delta, supporting the directional trade idea.
- **Divergence:** Price and delta disagree, suggesting possible absorption, exhaustion, or a failed auction that deserves further evaluation.

The principle: **Structural evidence** identifies the trade opportunity; **Price/Delta** evaluates the participation behind that response.

Key Level → Structural Response → Price/Delta Qualification → Trade Decision.

Peace. 🌎

Now to the charts from the 10-28-26 NY session.

A quick note:

I have been working on two “Awareness” indicators that fathom the depth of how a few Teachers have made some very profitable trades (considering Price/Delta and Volume Profiles), and I will share more over the next few weeks as I process through the checklists.

A reminder to self though:

The same “Waiting for price to close beyond the 15 opening range and the Value Range” still applies.

“Acceptance” is key.

I also researched and found a checklist for the **Initial Balance** and **Value Range (VAH/VAL) trading strategy** that “Fit Mom Trader” has made a success with (I will share an approach in the next few weeks)

The plan is create a process that is already successful, not to try to “system switch” (though its always creative) :O)

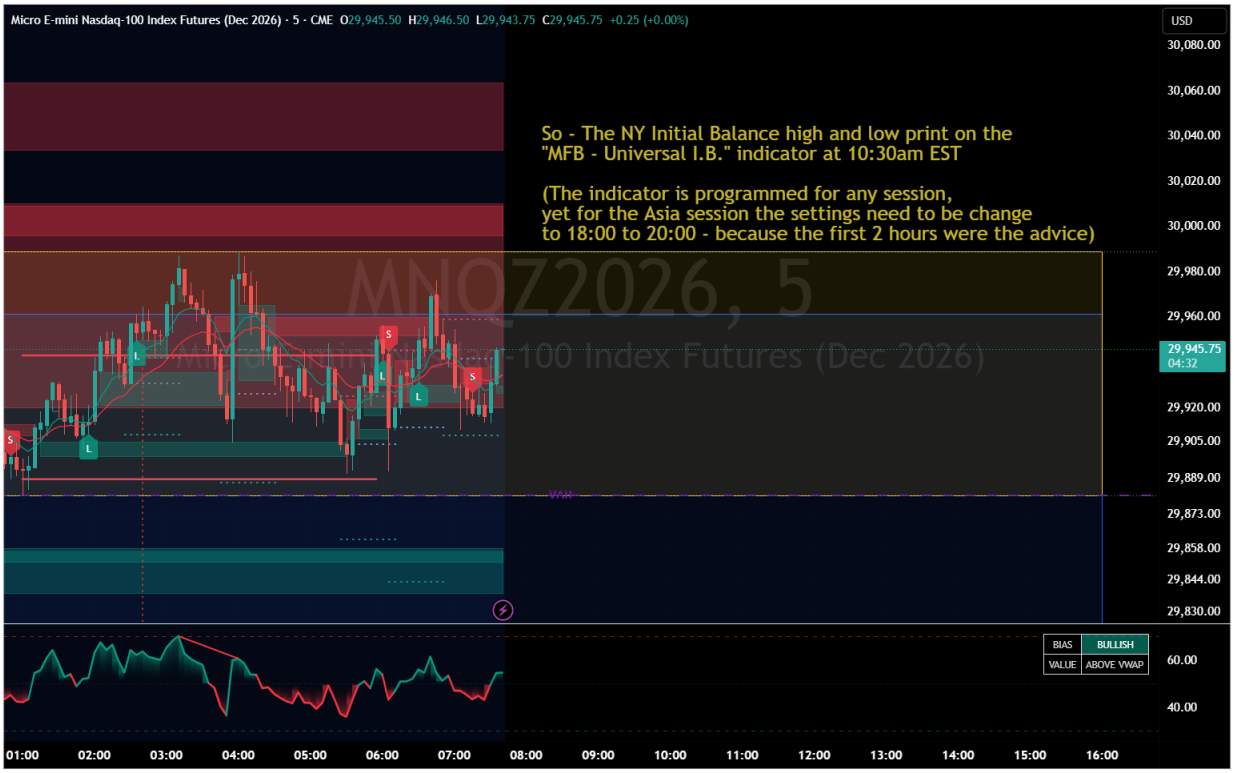

Cool – Peace.
