

What stage are we in? (Impulsion, correction, reversal)

Forex magnitude is strong, trade with the trend

check all supply/demand areas and mark these impulsions out of an area or MBO

Seek good "Measured" wave

clusters (short right many candles?)

space = strength

break line, Elliot wave (Fib based)

threats may be

is telling sentiment

what kind of pullback? (38% growth, 68.1% where are the convergence strategies)

Weekly Daily, 4 hour (good for recognizing pockets of support/resistance)

60 min, 30 min, 15, 1 min

Fractal expansion

Waits the story

Suggests supply/demand sentiment

these areas give us targets for entries and exits

past rallies?

EMA proper order (when price touches, could be end of impulsion)

10, 20, 30, 50

Seek bounce or cluster around 76%

"Fib"

Patterns?

Fractal expansion

Waits the story

Suggests supply/demand sentiment

only trade intraday 1 minute for better risk management

EMA proper order (when price touches, could be end of impulsion)

10, 20, 30, 50

Seek bounce or cluster around 76%

"Fib"

Patterns?

Fractal expansion

Waits the story

Suggests supply/demand sentiment

only trade intraday 1 minute for better risk management

Fractal expansion

Waits the story

Suggests supply/demand sentiment

only trade intraday 1 minute for better risk management

Again clusters with many candles, short of space between movements means strength for the area. when price makes a departure, this is a good foundation.

Have a 3 confirmation strategy or don't bother with entry. search for 3's --- things happen in 3's ---

For strategic analysis

www.dailyfx.com (choose) FX technical weekly

Don't buy going into supply areas. previous supply/demand areas have established a strong sentiment, so be aware of price approaching these areas

Have areas been tested and gone through?

resistance is good support

Enjoy the discovery " Be humble about progress, or she market will humiliate you.

Momentum: check size of impulsions --- if smaller then slowing towards correction.

Don't buy after impulsions

wait till after pullback

or MBO with other confluences.

ADX over 20 is momentum. (14 period)

ATR rising (20 period)

Be careful of impulsions that move into sideways movement.

Is the trend re-engaging at a demand/supply impulsion area. How before?

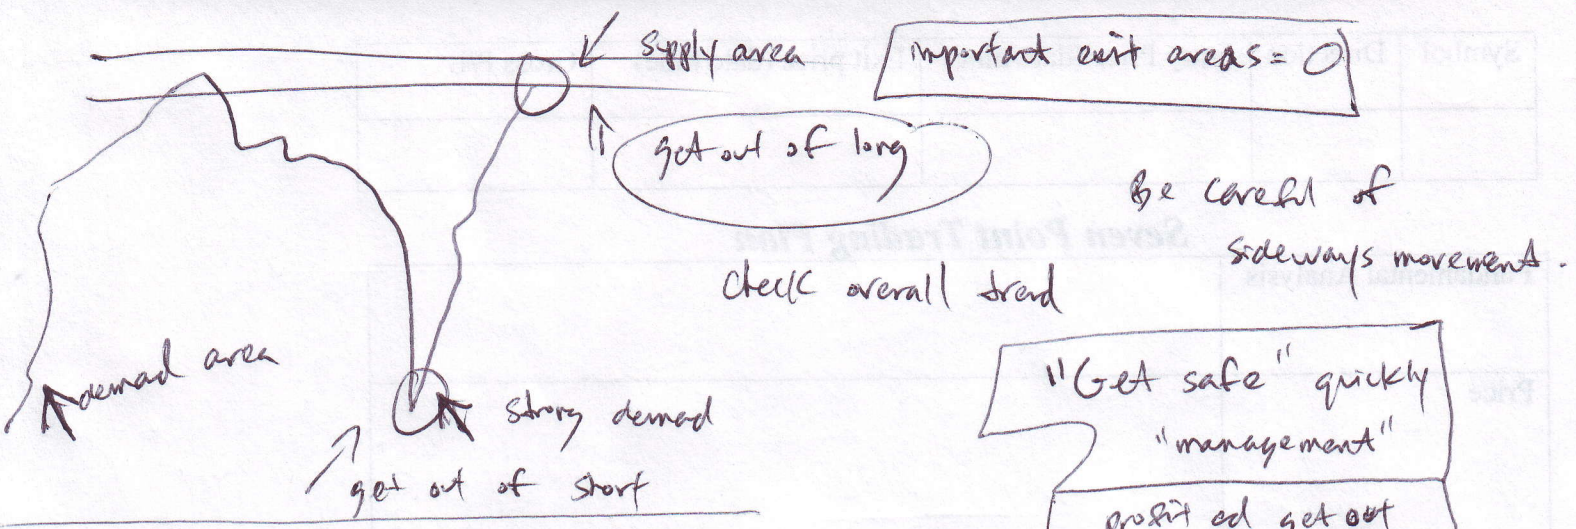

pt steps above recent highs

Be patient --- is this a previous supply/demand area. never trade in a range (supply/demand)

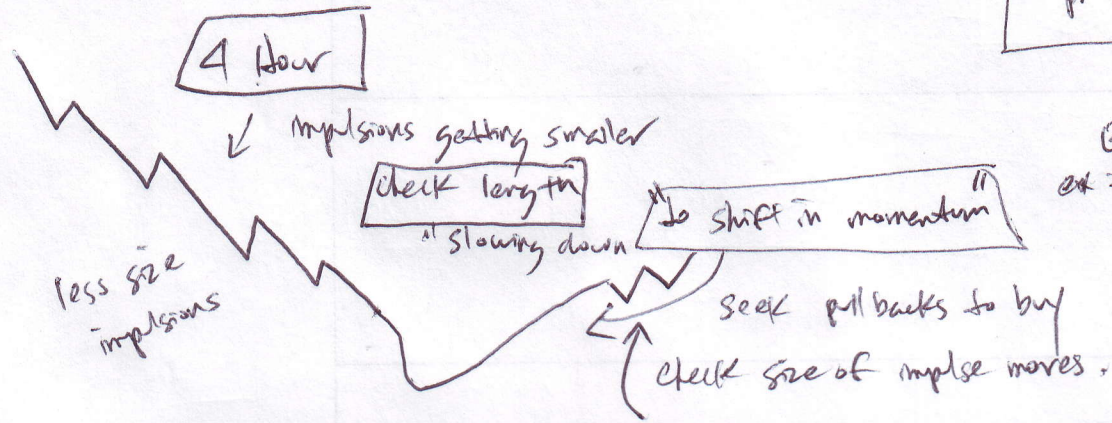

Round #'s? (if either momentum or its not)

et: Gold stocks USD (supposed to be)

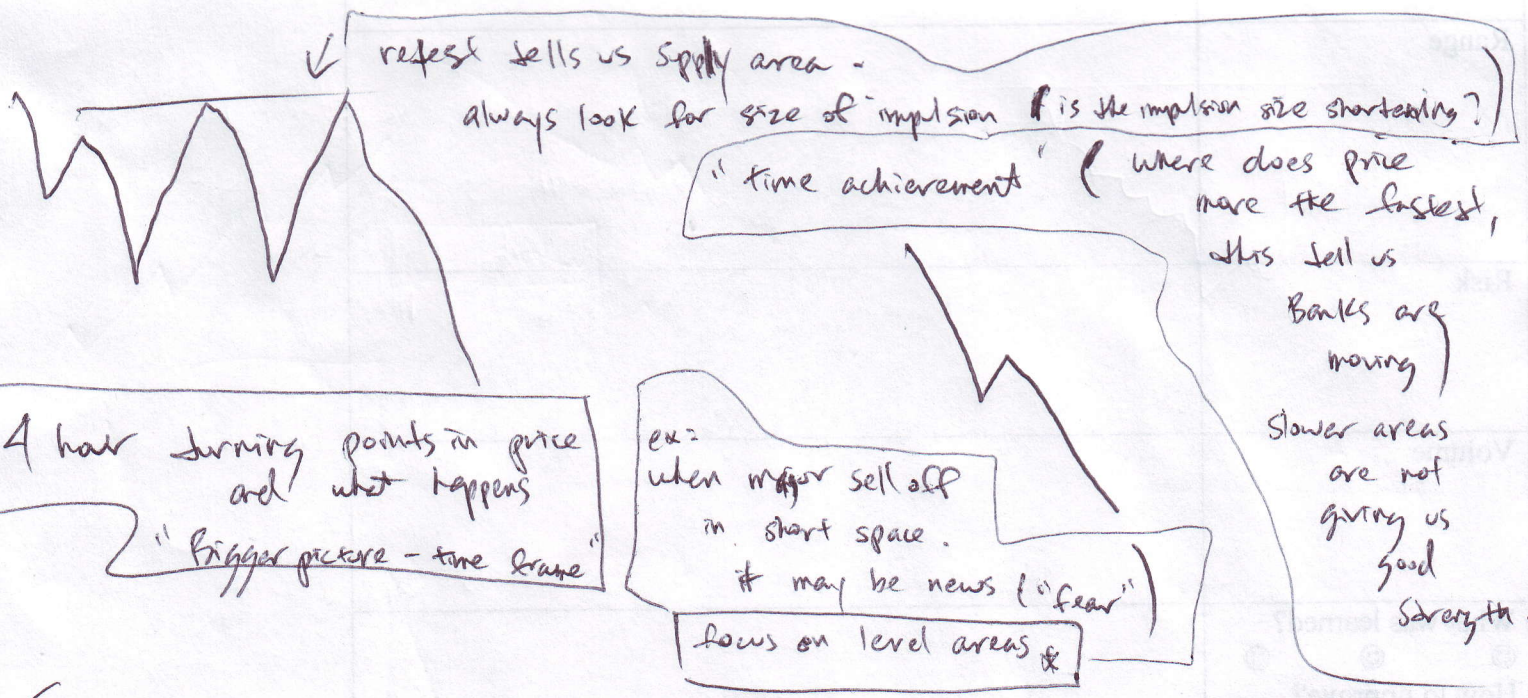

Remember that a currency gains and loses magnitude with other investments stocks/cold

"Get safe" quickly  
"management"  
profit ed get out

EUR USD  
ex: still downward size impulses increasing showing USD strength

Fibonacci time zones  
apparently work with larger time frames (years?)
